Schilling J. Clevinger B., Davie J.M., Hood L.;
"Amino acid sequence of homogeneous antibodies to dextran rearrangements in heavy chain V-region gene segments.";
Nature 283:35-40(1980).

-i- MISCELLANEOUS: THE SEQUENCES OF 10 HYBRIDOMA PROTEINS BIND DEXYRAN DIFFER FROM THAT SHOWN AT 1-7 POSITIONS,
WHICH OCCUR IN THE D AND J SEGMENTS.

-i- MISCELLANEOUS: THIS PROTEIN BINDS DEXTRAN.
-i- SIMILDARITY: Contains 1 immunoglobulin-like domain.

                             hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human antibody value of the invention and the antibodies in the method of the invention
                                                                                                                                                                                        Example 4; Fig 4A; 6lpp; English.
                                                                                                                                                                                                              New polynucleotide, polypeptide and antibody useful for diagnosing the presence of neutralizing antibodies against factor VIII and for treatment of hemophilia A patients with these antibodies -
                                                                                                                                                                 This invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human anti-factor VIII antibody VH clone EL-14 encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has henostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophila A patients. This sequence represents the human anti-factor VIII antibody VH EL-14 protein CDR3 fragment which is used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens

CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC ond gene mapping, and in recombinant production of (II). The
CC and gene mapping, and in recombinant production of (II). The
CC polynuclectides are also used in disgnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC disorders involving aberrant protein expression or biological activity.
CC disorders involving aberrant protein expression or biological activity.
CC disorders involving aberrant protein expression or biological activity.
CC disorders for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC camino acid sequences. ABG00010-ABG30377 represent novel human
CC specification, but was obtained in electronic format directly from WIPO
CX at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 3

                                                                                                                                                  pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

C P. acnes is also involved in infections of bone, joints and the central concerved system, however it is particularly involved in the inflammatory clesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a condition of the binds of the invention conditions and determining the amount of bound protein in the sample. The conditions may be used as antigens in the production of antibodies convergulate expression and activity of P. acnes proteins can be used to convergulate expression and activity of P. acnes protein and activity of P. acnes proteins. The antibodies may also be used as converging the acnes infections. The antibodies may also be used as convergence treat P. acnes infections. The antibodies may also be used as convergence inked immunosorbent assay (ELISA).

C enzyme linked immunosorbent assay (ELISA).

Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperprollferative disorders and disorders related to organ transplantation

N-PSDB; ABN77579. WPI; 2002-106200/14 Leach MD,

Shimkets RA

Claim 10; Page 1516; 2508pp; English

Sequences ABB31028-ABB35561 represent 4534 novel human proteins CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-CC ABN75897 represent cDNAs encoding them. The invention also encompasses CC polypeptides at least 80% identical to the ORF1-ORF4534 (collectively CC referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORF1-ORF4534 (collectively CC RFX nucleic acid sequences, vectors and host cells comprising ORFX polynucleotides, the recombinant production of ORFX proteins, antibodies CC specific for ORFX proteins, methods of detecting ORFX polynucleotides and cctivity, and methods of screening for modulators of ORFX persession or CC polypeptides, methods of screening individuals for a predisposition to an CC crange of biological activities, such as Cytokine, cell proliferation, timmune modulation, hamatopoiesis regulation, tissue growth, angiogenesis, activin or inhibin activity, chemotactic/ cc receptor/ligand, antiinflammatory activity, thmombolytic activity, and may also be involved in the determination of boddily characteristics, fertility and behaviour. ORFX proteins,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC genes themselves and the encoded proteins. The prokaryotes used are CC Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used CC to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense mucleic acid sequence is also useful to screen CC awide variety of organisms. The present sequence represents an CC awide variety of organisms. The present sequence represents an CC essential prokaryotic cellular proliferation protein. CC Note: The sequence data for this patent did not form part CC format directly from WIDO at

The present invention describes a method (MI) of evaluating the potential of a chemical entity (CE) to associate with a molecule or molecular complex comprising a binding pocket (BP) defined by specific structural coordinates (SC) of D-Ala-D-Ala ligase (I) E coli amino acids Lys144, Glu180, Lys181, Leu183, Glu187, Asp257 and Glu270, by employing a computational unit to perform a fitting operation between CE and BP defined by SC and analysing the results of the fitting operation to

                      The present invention describes a method (M1) of evaluating the potential of a chemical entity (CE) to associate with a molecule or molecular complex comprising a binding pocket (BP) defined by specific structural coordinates (SC) of D-Ala-D-Ala ligase (I) E. coli amino acids Lys144, Glu180, Lys181, Leu183, Glu187, Asp257 and Glu270, by employing a computational unit to perform a fitting operation between CE and BP defined by SC and analysing the results of the fitting operation to quantify the association between CE and BP. Also described is a method (M2) for identifying a potential inhibitor of (I). M1 is useful for evaluating the potential of a chemical entity to associate with a constitution of the potential of a chemical entity to associate with a constitution of the potential of a chemical entity to associate with a constitution of the constitution
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                quantify the association between CE and BP. Also described is a method (M2) for identifying a potential inhibitor of (I). M1 is useful for evaluating the potential of a chemical entity to associate with a molecule or molecular complex comprising a binding pocket. M2 is useful for identifying a potential inhibitor of D-Ala D-Ala ligase. The methods are useful in the identification of key interaction in the active site of the enzyme, as well as the design and optimisation of inhibitors. The methods are also useful in the drug discovery methods, particularly for discovering new drugs that inhibit D-Ala-D-Ala ligase, an essential enzyme in the formation of bacterial cell walls. The present sequence represents a D-Ala-D-Ala ligase amino acid sequence given in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Magee
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         D-Ala-D-Ala ligase;
                                                                                                                                                                                                                                                                                                                                                                                                                                Example 8; Fig 10; 115pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Evaluating association binding pocket defined computational unit for

                         biodiversity and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), lymphoid cell disorders, osteoporosis, osteoarthritis, bone
                                                                                                                                                                                                                                                                                                                                                             neurodegenerative disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; genetic disorder; gene mapping; medical imaging; cancer; neurodegenerative disorder; lymphoid cell disorder; osteoporosis; Parkinson's disease; Alzheimer's disease; bone degenerative disorder; osteoarthritis; periodontal disease; liver fibrosis; viral infection; fungal infection; bacterial infection; autoimmune disease; diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for identifying a potential inhibitor of D-Ala-D-Ala ligase. The methods are useful in the identification of key interaction in the active site of the enzyme, as well as the design and optimisation of inhibitors. The methods are also useful in the drug discovery methods, particularly for discovering new drugs that inhibit D-Ala-D-Ala ligase, an essential enzyme in the formation of bacterial cell walls. The present sequence represents a D-Ala-D-Ala ligase amino acid sequence given in an example
                                                                                                                                                                                                                   The invention relates to human polynucleotides and the polypeptides they encode. The polynucleotides and polypeptides are useful in diagnostics,
                                                                                                                                                                                                                                                                                                     Claim 9;
                                                                                                                                                                                                                                                                                                                                                          disorders, and
                                                                                                                                                             encode. The polynucleotides and polypeptides are useful in diagnostic forensics, gene mapping, medical imaging, identification of mutations responsible for genetic disorders or other traits, assessing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-MAR-2001; 2001US-0810173

The present sequence represents rat TAO2 protein kinase, which is capable of phosphorylating MEK3 (a MAP/ERK kinase). TAO kinases, and related polypeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are cc potentially useful for treating or preventing: (1) inflammation, c protein (Map) kinase pathways. These modulators are cc autoimmune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders can neurodegeneration (enhancers of phosphorylation). TAO kinases are modulators and as immunoassay reagents for detecting TAO kinases.

CC modulators and as immunoassay reagents for detecting TAO kinases, and (b) in the form of fragments, for detecting TAO kinase polynucleotides can be used: (a) for recombinant expression cc fao kinase polynucleotides in standard hybridisation and amplification cc tests. TAO kinases are highly specific for MEK3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel human enzyme CC polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences cc encoding them. The enzyme polypeptides of the invention may comprise the functional classes of exidoreductases, transferases, hydrolases, lyases, cc isomerases or ligases. The sequences of the invention are useful in the cc disorders including hyperproliferative disorders (e.g. cancer), cc disorders including hyperproliferative disorders (e.g. cancer), cc immunodeficiency disorders (e.g. AADS) autoimmune disorders (e.g. carchritis), neurological disorders (e.g. Alzhaimer's disorders (e.g. arthritis), neurological disorders (e.g. halametery disorders (e.g. asthma), cardiovascular disorders (e.g. halametery disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), cc (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), cc (e.g. infertility) and infectious disorders (e.g. influenza). The cc (e.g. infertility) and infectious disorders (e.g. influenza). The cc (e.g. infertility) and infectious disorders (e.g. influenza). The cc invention.
                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of that and products dependent on DNA and CC amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed consection in but was obtained in electronic format directly from WIPO CC at figure and polymblished_pct_sequences.

                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                  CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II), (II) is useful in gene therapy techniques CC (II), (II) is useful in gene therapy techniques CC quantitating a polypaptide in tissue, as molecular weight markers and as CC imaging of sites expressing (II). (I) and (II) are useful in medical ci imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC the polypeptide and polynucleotide sequences have applications in CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC at ftp.wino.int/mnh/mhishad not sequences.
                                                                                                                                                                                                                                                                  Matches

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II) and for chromosome CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC imaging of sites expressing (II). (I) and (II) are useful in medical CC disorders involving aberrant protein expression or biological activity. CC disponsible for genetic disorders are useful in medical CC disorders involving aberrant protein expression or biological activity. CC disponsible for genetic disorders sor other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences of the invention.

CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed construction, but was obtained in electronic format directly from WIPO can first the printed construction.
                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 20; SEQ ID No 56187; 103pp; English.

D15R protein - variola minor virus (strain Garcia-1966)
C;Species: variola minor virus
C;Bate: 24-Nov-1999 #sequence_revision 24-Nov-1999 #text_change 24-Nov-1999
C;Accession: B72175
R;Shchelkunov, S.N.; Totmenin, A.V.; Gutorov, V.V.; Safronov, P.F.; Massung, submitted to GenBank, March 1998
A;Description: Analysis of the complete coding sequence of DNA of alastrim vA;Reference number: A72150
A;Accession: B72175
A;Accession: B72175
                                                                                                                                            A; Notatus, r.-..
